Summary

Software Engineering student with strong foundation in Data Structures, Algorithms, and Full-Stack Development. Experienced in building scalable and secure applications using React.js, Node.js, MongoDB, and C++ and have a keen interest in AI/ML. SIH 2024 Winner with proven ability to design efficient, production-ready systems and collaborate in high-performance teams.

Education

Jaypee Institute Of Information Technology

BTech in Computer Science Engineering (CGPA 8.77/10.0)

July 2023 - June 2027

Uttar Pradesh, India

Veda Vyasa DAV Public School, CBSE

XII, Central Board of Secondary Education (Grade 95.6%)

April 2022 - March 2023

Delhi, India

Achievements

Smart India Hackathon 2024 Winner, Government Of India

December 2024

Won the SIH 2024, a national-level competition with over 300,000 teams. Developed a solution for enhancing the security of the ML Model for UIDAI enhancing data security.

Smart India Hackathon 2025 Runner Up, Government Of India

December 2025

Runner Up for the problem statement given by ISRO, in which we developed an advanced geospatial intelligence platform for processing and analyzing Sentinel-2 satellite imagery with AI-powered multimodal vision capabilities.

Technical Skills

Languages & Frameworks : C++, Python, Java (Basic), Javascript, React.js, Node.js, Express.js.

ML & Data Science : Pandas, NumPy, Scikit-learn, Data Visualization (Matplotlib and Seaborn), OpenCV, PyTorch.

Databases & Version Control : MySQL, MongoDB, Git/GitHub, GitLab.

Course Work : DSA, DBMS, OOP, Operating Systems, Computer Networks, Compiler Design(basic), Web Technologies.

Coding Profiles : Leetcode (300+ Problems), Codechef (Rating : 1516).

Projects

SecureFace : Securing Client Side Face Authentication - SIH Winning Project ([GitHub Link](#))

| [React](#), [Express.js](#), [Node.js](#), [AWS](#), [MongoDB](#), [AI](#) |

- Led the frontend development and engineered a secure, integrable UI/UX framework for a UIDAI website.
- As a team, we built and deployed a protected ML model delivery pipeline with CI/CD integration, tamper-detection modules, and KMS, DHKE-RSA, and digital-signature safeguards, boosting data-transfer security by up to 95%.

AI Interview Prep-App ([GitHub Link](#))

| [React](#), [Express.js](#), [Node.js](#), [JWT](#), [MongoDB](#), [Tailwind CSS](#), [Gemini API](#) |

- Built a full-stack interview preparation platform integrating Gemini APIs for dynamic question generation, implementing real-time filtering and a responsive UI for improved user interaction.
- Enhanced usability with secure login, intuitive UI/UX, and real-time topic filters, boosting response accuracy and interaction speed

InkFlow : Handwriting Generating Application for Minor Project ([GitHub Link](#))

| [React.js](#), [Python\(Flask\)](#), [PyTorch](#), [PaddleOCR](#), [OpenCV](#), [FontTools](#) |

- Collaborated on a web application that converts handwritten characters into custom .ttf fonts.
- Contributed to the AI pipeline for character segmentation, classification, and font generation using PyTorch, PaddleOCR, OpenCV, and FontTools.

Leadership and Communication

Coordinator, KNUTH Programming Hub

July 2025 onwards

- Mentored juniors and conducted sessions on Competitive Programming and Data Structures
